clickpos

global retail management
Internet based technology

About Clickpos system & its benefits

Clickpos is an Internet based computer software designed specifically for managing multi-chain retail stores. Unlike typical systems, clickpos is designed on a state-of-the-art platform with powerful Microsoft SQL Database, using the Internet as the gateway, connecting from 1 to 900 of your stores. The system caters for all requirements including stock control, sales, capturing customer details, produce receipt for customers, repairs and returns, layby/layaways, staff timesheets, security and permission access levels for users. You can seamlessly connect all your products on your website for online shopping. All this is controlled over the use of the Internet. You can be anywhere in the world and still have 24/7 instant access to all areas of the system.

At the Retail Store, staff can view price & availability of stock in other stores and produce proof of purchase receipts even if purchase was made in other outlets. Transfer of stock between stores is as easy as scanning the product barcode then producing consignment notes.

At the Head Office, management can view the activity of all stores, such as stock levels, orders from stores, end of day banking and sales. They can also control users and their level of access to the system. You may even track and trace the activity of a single product from when ordered to sell date and time stamped for auditing purposes. We have included dozens of management reports, also including a powerful Report Generator that can be used to export data to your in-house financial systems.

The system can be hosted at your premises or in most cases, our clients opt to use our facilities to host the system and the database. We service the biggest names in the telecommunications and other specific retail chains such as apparel and service industries.

Our services include, hosting the application and database with 24/7 access to the system. You do not need to worry about database backups or maintenance of system, therefore saving you thousands of dollars. We can even tailor design any special requirements you may have.

We are a global company servicing Australia, New Zealand, USA and UK. Our credibility in the IT industry has moved us miles ahead of our biggest competitors, thanks to the technology behind our unique system.

Free upgrades all performed automatically so you do not have to lift a finger, we provide instant support, further more our systems are so smart that if there are any service issues we are instantly notified, so before you get on the telephone we are already looking at the issue.

Staff training for use of the system is a thing of the past. Included in our system is Video training modules, so you and your new staff can sit back and enjoy simple to understand video training modules. See samples of the video training modules on our website.

How much does it cost you ask.. well, we can tell you it won't break the bank. We work on a monthly licence fee basis, so, as your requirements grow, the system grows. You don't have to invest thousands of dollars on software when compared to monthly payments of under $80* plus store licence fee per licence/store. CHEAP ISN'T IT!!! There are no contracts to sign, and we provide free telephone support and training.

So if you have an existing outdated manual system or you wish to upgrade, simply submit your details in a Free Trial, and we will email you the demo login details and have one of our reps contact you. You have already decided to go online, enter your details into Application forms and we can have you ready to go in a matter of a few hours.

*Visit the "Pricing" section on our website for options and examples. Pricing subject to change. Does not include hardware.

System Features

Retail Store

Point of Sale
Selection of tools available for your shop front. Touch screen or conventional monitor, receipt printer, barcode scanner, cash drawer and label printer for your stock room. You may use a conventional A4 printer as receipt printing. Highly recommend the use of barcode scanner.

Customer Details
Capture customer details while making a sale or reuse the same customer details for account clients. You may create a quotation or even a purchase order for given customer.

Stock Transfers
Transferring stock between stores is a breeze. Just select the branch you are transferring to then scan the items barcode. You may wish to print a consignment note for each delivery.

Search for Products in Other Company owned stores
All staff can instantly view product pricing and its availability in other stores. So no more costly telephone call between stores to find a particular product line.

Branch Level Reporting
Staff can view various reports, for example, end-of-day banking, stock levels, sales information even their own sale performance.

Stock Control Warehouse

Purchase Orders
Purchase Orders can be created instantly utilising the companies shared product catalogue. Order creation is either made by head office or individual branch, and can be delivered to one or many destinations.

Stock Control
Here's the real power of the system. Management can view all stock held in each store by click of a button, and because the system data is live, all information is up to the minute.

Create Your Own Barcode Labels
If you wish to create your own adhesive barcode labels, then simply produce labels as stock is added.

Stock Transfers
Transferring stock between stores is a breeze. Just select the branch you are transferring to then scan the items barcode. You may wish to print a consignment note for each delivery.

Product Catalogue and Pricing
You may control all products listed in your catalogue from one source. These include adding new lines of products, changing prices etc.
The product catalogue is broken down to 5 levels of categories which can be tailored to your requirements in the apparel industry, by master category, sub category, style, colour & size. If in the auto industry, by make, model, year etc.

Head Office and Management

Global Reports
There are dozens of pre-designed reports you can choose from, including Sales, Stock Financial Accounts and other related reports.

Report Generator
Another powerful feature inbuilt is the report generator wizard where, Management can design, view and export any combination of data to your favourite application or financial system.

User Permission and Security
The system is designed so you may create unlimited users and user groups, which restricts users from accessing sensitive data.

Transaction Log for Audit
An inbuilt audit tracking lists all activities of user actions, including date and time stamp of user login/logout, inventory and sale activities. This powerful tool can identify and track any item from when it is ordered, sold, repaired etc.

Accounts Receivable / Payable
Included in the system is simple to use cashbook accounts designed for those who have minimal accounting background. The financial reports reflect all requirements of your accountant including tax calculation for purchases and sales.

General Information

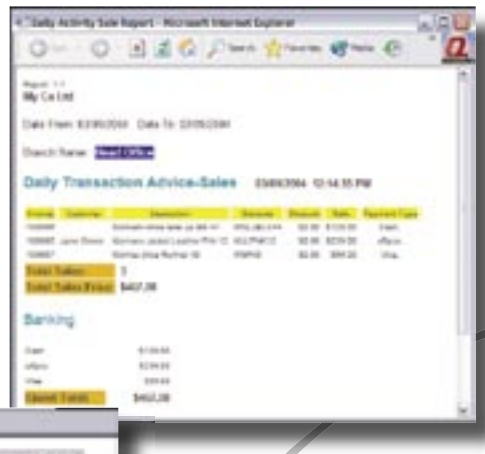

Online User Training Modules
It is important to give your staff full training so they are confident when using the system, so we devised Online training modules. Any new employees can rapidly understand the system in a matter minutes. Just click the training modules then watch and listen.

SMS Gateway
The system is designed to notify retail owner/manager on daily sales information and customers for promotions, birthday greetings.

Web Presence Online Shopping
Seamlessly integrate all your products into your website, where your customers purchase online.

How Clickpos system works

End of Day Banking

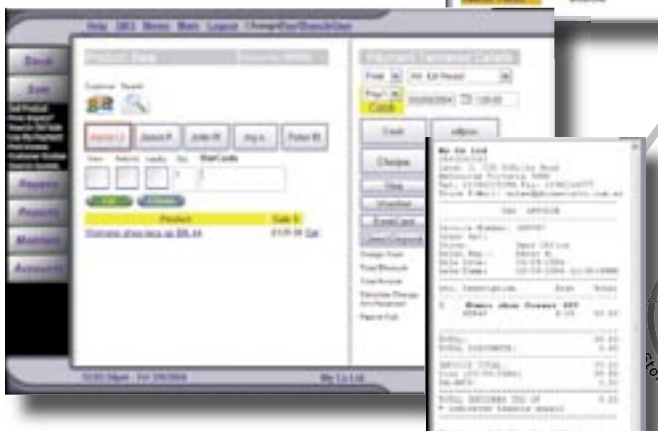

End of Day, staff can finalise takings for the day. At head office, view all store takings instantly.

Stock Availability in Other Stores

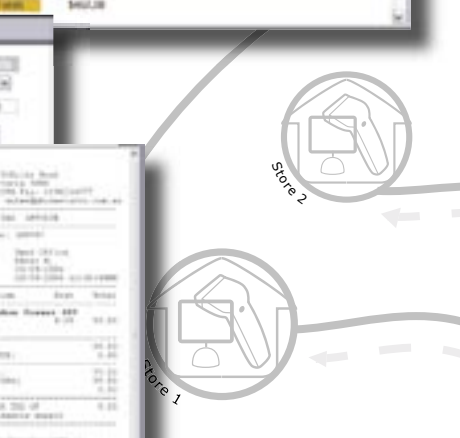

All staff can view pricing and availability of stock in other stores.

Point of Sale

Selling your products is a simple 2-action process, where you scan the items then click the method of pay. The receipt is printed and cash drawer opens. See how easy it is to make a sale in our training modules on our website.

Seamless integration to your website where your customers can view your product catalogue, specials and even place orders.

If you have on-the-road sales reps, you can transfer stock to them and give them controlled access to system. Reps can evaluate and view their own progress.

Management can gain access 24/7, at home or anywhere in the world so long as you have Internet connection.

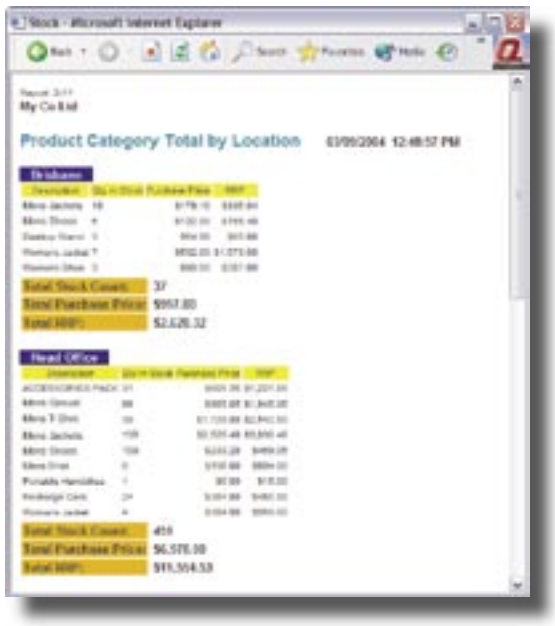

The system can automatically send text message to management cellular phones, informing daily sale figures for all stores.

Management Reports

All sale information is updated "as the sale happens" so you're always up-to-date. System includes a powerful report generator so you can export any data to your financial systems.

Stock Control

Here's the real power of Clickpos. Transferring stock between your stores is as easy as scanning product barcode. There are dozens of stock reports to help you make quick decisions.
